

There are two type of Elements

1. Block Element
2. Inline Element

Block Elements

- A block element always starts on a new line, and the browsers automatically add some space (a margin) before and after the element.
- Two commonly used block elements are: <p> and <div>.

Here are the block elements:-

<address> <article> <aside> <blockquote> <dd> <div> <dl> <dt> <fieldset> <figcaption>
<figure> <footer> <form> <h1>-<h6> <header> <hr> <main> <nav> <noscript>
<p> <pre> <section> <table> <tfoot> <video>

Example:

<p>Hello World</p>

<div>Hello World</div>

Inline Elements

- An inline element does not start on a new line.
- An inline element only takes up as much width as necessary.

Here are the inline elements:

<a> <abbr> <acronym> <bdo> <big>
 <button> <cite> <code> <dfn>
<input> <kbd> <label> <map> <object> <output> <q> <samp> <script> <select> <small>
 <sub> <sup> <textarea> <time> <tt> <var>

Example:

Hello World

<bdo dir="rtl">Hello World</bdo>

Note: An inline element cannot contain a block element!

Que 1:- Which type of elements takes up the full width?

1. Block elements
2. Inline elements
