

What is HTML? – Introduction

- HTML stands for Hyper Text Markup Language
- HTML is the standard markup language for creating Web pages
- Tim Berners-Lee invented HTML in 1991
- HTML describes the structure of a Web page
- HTML consists of a series of elements
- HTML elements tell the browser how to display the content
- When saving an HTML file, use either the .html or .htm file extension.

What is an HTML Element?

- An HTML element is defined by a start tag, some content, and an end tag:
- `<tagname> Content goes here... </tagname>`
- The HTML element is everything from the start tag to the end tag:
- `<h1>My First Heading</h1>`
- `<p>My first paragraph.</p>`

A Simple HTML Document (Example)

```
<!doctype html>
<html>
  <head>
    <title>demo</title>
  </head>
  <body>
    <h1>This is a heading</h1>
    <p>This is a paragraph.</p>
    <p> This is another paragraph. </p>
  </body>
</html>
```

Example Explained

- The `<!DOCTYPE html>` declaration defines that this document is an HTML5 document
- The `<html>` element is the root element of an HTML page
- The `<head>` element contains meta information about the HTML page
- The `<title>` element specifies a title for the HTML page (which is shown in the browser's title bar or in the page's tab)
- The `<body>` element defines the document's body, and is a container for all the visible contents, such as headings, paragraphs, images, hyperlinks, tables, lists, etc.
- The `<h1>` element defines a large heading
- The `<p>` element defines a paragraph
