

HTML Tables

Tables are used to arrange data into rows and columns.

Table:- To define a table you can use the `<table>` and a `</table>`

Table Rows:- Each table row is defined by a `<tr>` and ends with a `</tr>` tag.

Table Cells:- Each table cell is defined by a `<td>` and a `</td>` tag.

Table Header:- To define table header you can use `<th>` tag instead of `<td>` tag

Example

```
<table border="2">
<tr>
  <th>Company</th>
  <th>Contact</th>
  <th>Country</th>
</tr>
<tr>
  <td>Centro comercial Moctezuma</td>
  <td>Francisco Chang</td>
  <td>Mexico</td>
</tr>
</table>
```

Table Sizes

Tables can have different sizes for each column, row or the entire table.

The width and height properties are specify the size of a table, row or column.

Example:-

```
<table style="width:100%">  
<th style="width:70%">Firstname</th> <td style="width:70%">Firstname</td>  
<tr style="height:200px">
```

Table Padding & Spacing

Cell Padding:- Cell padding is the space between the cell border and the cell content.
By default the padding is set to 0.

Example:-

```
th, td {  
    padding: 15px;  
}
```

Cell Spacing:- Cell spacing is the space between each cell. By default the space is set to 2 pixels.

Example:-

```
table {  
    border-spacing: 30px;  
}
```

Colspan & Rowspan

In a table, cells can be merged to span multiple rows and columns.

Colspan:- The colspan attribute is used to merge a cell across multiple columns.

Example:-

```
<table>
  <tr>
    <th colspan="5">Name</th>
    <th>Age</th>
  </tr>
  <tr>
    <td colspan="3">Jill</td>
    <td>Smith</td>
    <td>43</td>
  </tr>
</table>
```

Rowspan:- The rowspan attribute is used to merge a cell across multiple rows.

Example:-

```
<table>
  <tr>
    <th>Name</th>
    <td>Jill</td>
  </tr>
  <tr>
    <th rowspan="2">Phone</th>
    <td>555-1234</td>
  </tr>
</table>
```

Que 1:- What is the correct tag name for a table-cell in HTML?

- `<tc>`
- `<td>`
- `<tr>`
