

HTML Favicon

A favicon image is displayed to the left of the page title in the browser tab

Example:-

```
<!DOCTYPE html>
```

```
<html>
```

```
<head>
```

```
  <title>My Page Title</title>
```

```
  <link rel="icon" type="image/x-icon" href="/images/favicon.ico">
```

```
</head>
```

```
<body>
```

```
<h1>This is a Heading</h1>
```

```
<p>This is a paragraph.</p>
```

```
</body>
```

```
</html>
```

Head Element

The <head> element is a container for the following elements:

<title>, <style>, <meta>, <link>, <script>, and <base>.

<base> Element

The <base> element specifies the base URL for all relative URLs in a page.

Example:-

```
<head>
```

```
<base href="https://www.w3schools.com/" target="_blank">
```

```
</head>
```

```
<body>
```

```

```

```
<a href="tags/tag_base.asp">HTML base Tag</a>
```

```
</body>
```

<meta> Element

The <meta> element is used to specify the character set, page description, keywords, author of the document, and viewport settings.

Define the character set:

```
<meta charset="UTF-8">
```

Define keywords for search engines:

```
<meta name="keywords" content="HTML, CSS, JavaScript">
```

Define a description of your web page:

```
<meta name="description" content="Free Web tutorials">
```

Define the author of a page:

```
<meta name="author" content="John Doe">
```

Refresh document every 30 seconds:

```
<meta http-equiv="refresh" content="30">
```

Setting the viewport to make your website look good on all devices:

<meta name="viewport" content="width=device-width, initial-scale=1.0">

- The **width=device-width** part sets the width of the page to follow the screen-width of the device
- The **initial-scale=1.0** part sets the initial zoom level when the page is first loaded by the browser.

Que 1:- In which HTML element is the Favicon defined?
