

HTML Links

links are hyperlinks. You can click on a link and jump to another document.

URL stand for Uniform Resource Locator and **href** stand for Hypertext reference

Syntax:-

```
<a href="url">link text</a>
```

Example:-

```
<a href="https://www.google.com" target="_blank">Visit Google!</a>
```

The **target** attribute specifies where to open the linked document

- **_self-** Default. Opens the document in the same window
- **_blank-** Opens the document in a new window or new tab

Use an Image as a Link

To use an image as a link, just put the `<img>` tag inside the `<a>` tag

Example:-

```
<a href="index.html">
```

```
  
```

```
</a>
```

Link to an Email Address:-

```
<a href="mailto:someone@example.com">Send email</a>
```

Create Bookmarks

links can be used to create bookmarks, so that readers can jump to specific parts of a web page.

Example:-

First, use the id attribute to create a bookmark

```
<h2 id="C4">Chapter 4</h2>
```

Then, add a link to the bookmark ("Jump to Chapter 4"), from within the same page

```
<a href="#C4" >Jump to Chapter 4 </a>
```

Que 1:- What is a correct syntax for an HTML hyperlink?

- `<a href='/home.htm'>Visit W3Schools.com!</a>`
- `<link href='/home.htm'>Visit W3Schools.com!</link>`
- `<alink href='/home.htm'>Visit W3Schools.com!</alink>`
